

Endre Guljas

Toronto, ON | endre.guljas@gmail.com | 416-886-7675 | linkedin.com/in/endre-guljas | github.com/EndreGuljas

Professional Summary

- Data Analyst with an Aerospace Engineering background, offering a strong foundation in analytical thinking, technical problem solving, and numerical analysis
- Professional experiences using Excel, SQL, and Python to clean and analyze raw datasets for both business analytics and machine learning workflows
- Proven ability to thrive in fast-paced startup environments, working with engineering and product teams to ensure data quality, feature readiness, and dependable pipelines
- Experienced in building scalable data pipelines and performance reports, with a focus delivering actionable insights across tech, e-commerce and finance
- **Technical skills:** SQL, Python, Power BI, Tableau, Excel, Exploratory Data Analysis, ETL/Data Warehousing

Professional Experience

Data Analyst Intern

LUCA Theory

Jan 2025 - Jun 2025

- Worked in a fast-paced startup environment to deliver high quality data that directly supported model performance and product decisions
- Collected, cleaned and standardized sports betting data across multiple leagues and markets using SQL and Python, transforming raw data into structured datasets for multiple predictive machine learning models
- Worked closely with machine learning engineers to define features, validate inputs, and fix data quality issues in order to support efficient model training, evaluation and iteration

Data Analyst Intern

Paidwork

Sep 2025 - Oct 2025

- Worked on the AI and Machine Learning team in a fast-paced startup environment, performing exploratory data analysis and data validation to support model training and evaluation
- Worked on the development of the Identity Verification and AI support bots by preparing and structuring datasets in Python, directly supporting reliable classification and anomaly detection workflows for the ML team

Personal Projects

End-to-End Data Warehouse and Analytics Report (SQL)

- Built a scalable SQL data warehouse from scratch using a medallion architecture (bronze, silver, gold) to integrate 120k+ rows of fragmented data, creating automated ETL pipelines with stored procedures and bulk loading in order to eliminate data silos
- Performed exploratory data analysis on categorical and numerical features, revealing that 60% of revenue came from three key regions and that product sales followed an 80/20 distribution
- Built analytics models and reporting views using a dimensional star schema to track year-over-year growth and customer behavior, uncovering a VIP segment with 3x higher retention which informed targeted loyalty and reinvestment strategies

E-commerce Performance Analysis Report (Excel, SQL and Power BI)

- Built a relational SQL database and Power BI dashboard for a global e-commerce business, integrating 108k+ transactions to analyze four years of sales performance and customer behaviour
- Analyzed revenue performance and customer dynamics through EDA and reporting, finding an ~80% Q4 2022 revenue decline driven by a 38% drop in order frequency and a 52% North America revenue concentration

Education

Bachelor of Engineering - Aerospace Engineering

Sep 2021 - Apr 2025

Toronto Metropolitan University
